SIEMENS 7<sup>815</sup>

SQM5..., gear train side with drive shaft no. 7

SQM5..., rear, version without second drive shaft end

SQM5..., rear, version with 2 drive shaft ends

# Actuators for Air and Gas SQM5... Dampers

with electronic modules

- Reversible electromotive actuators up to 40 Nm
- Running times from 10 to 90 seconds
- With 1 or 2 drive shaft ends; drive shafts can be exchanged or available as separate items
- Can be equipped with electronic modules for control and position feedback signal via steady signals
- Internal and external position indication
- Drive shaft and cam shaft can be separately disengaged
- Choice of UL-listed types for use in the U.S. and Canada
- Supplementary Data Sheets, refer to N7921 and N7922

The SQM5... and this Data Sheet are intended for use by OEMs which integrate the SQM5... in their products!

#### Use

The SQM5... actuators are used to drive air and gas dampers of oil and gas burners of medium to large capacity.

They are used primarily for load-dependent control of the amounts of gas, oil and combustion air:

- In connection with 3-position or modulating controllers (e.g. 4...20 mA), or
- Directly by burner controls

To avoid injury to persons, damage to property or the environment, the following warning notes must be observed!

#### Only qualified staff may open, interfere with or modify the actuators!

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff
- Before making any wiring changes in the connection area, completely isolate the
  plant from mains supply (all-polar disconnection). Ensure that the plant cannot be
  inadvertently switched on again and that it is indeed dead. If not observed, there is a
  risk of electric shock hazard
- Ensure protection against electric shock hazard by providing adequate protection for the connection terminals
- Protection against electric shock hazard is ensured by folding upwards cover of control unit (made of plastic), allowing safe setting of the cams when mains voltage is present
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state
- Fall or shock can adversely affect the safety functions. Such actuators must not be put into operation even if they do not exhibit any damage

#### **Mounting notes**

• Ensure that the relevant national safety regulations are complied with

#### Standards and certificates

# Applied directives:

Low-voltage directive

2014/35/EC

• Electromagnetic compatibility EMC (immunity)

2014/30/EC

Compliance with the regulations of the applied directives is verified by the adherence to the following standards / regulations:

 Automatic electrical controls for household and similar use Part 1: General requirements DIN EN 60730-1

 Automatic electrical controls for household and similar use Part 2-14: Particular requirements for electric actuators DIN EN 60730-2-14

# The relevant valid edition of the standards can be found in the declaration of conformity!

EAC Conformity mark (Eurasian Conformity mark)

ISO 9001:2008 ISO 14001:2004 OHSAS 18001:2007

For use in the U.S. / Canada, the actuators carry type suffix «R» (see example) and are UL- and CSA-listed.

Example: SQM50.480R1

Building Technologies Division

CC1N7815en 13.05.2016

#### **Disposal notes**

The actuator contains electrical and electronic components and must not be disposed of together with domestic waste.

Local and currently valid legislation must be observed.

#### Mechanical design

Housing

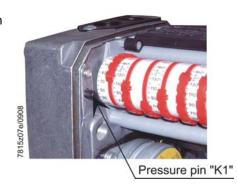

- Housing sections made of die-cast aluminium
- Covers made of impact-proof and heat-resistant plastic

Drive motor

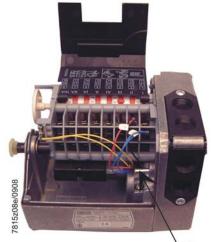

· Reversible and locking-proof synchronous motor

Couplings

- Driven shaft and cam shaft can be adjusted via 2 separately couplers, independent of the gear train
- Shaft can be disengaged from gear train and motor via manual operation of a coupler (pressure pin «K», refer to «Technical data»).
- Automatic reengagement
- Pressure pin «K...»
  - Disengagement of gear train / cam shaft by pressing pin «K1»

- Disengagement of cam / gear train by pressing pin «K2»

Pressure pin "K1"

Cam shaft drive

Backlash-free gearing

Adjustment of switching points

- With rotating cams
- Scales beside the cams indicate the angle of the switching point

Position indication

- Internally:
  - Scale at the end of the drive shaft
  - Black scale for counterclockwise rotation, single arrow on the cam
  - Red scale for clockwise rotation, double arrow on the cam
- Externally:
  - Scale in viewing window

3/12

# Mechanical design (cont'd)

Electrical connections	<ul> <li>Blade terminal on micro switch</li> <li>Screw terminals for «N» and «PE»</li> <li>Subassembly and fixing of wiring by means of removable Pg plastic insert possible</li> <li>Easy introduction of cables through large openings in the housing</li> <li>Fixing of Pg insert with all cables by means of a screw</li> </ul>
Gear train	Maintenance-free gearwheels and bearings

# Caution!

Condensation, formation of ice and ingress of water are not permitted!

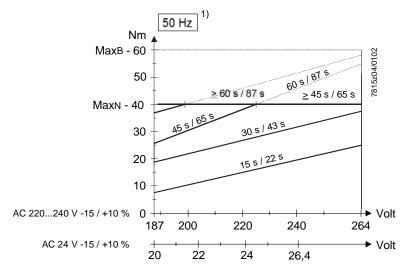

SQM50...

SQM53... / SQM54...

SQM56...

Legend

1) At 60 Hz frequency, running times are about 17 % shorter and torques are proportionally lower

#### Note!

Each drive side is capable of delivering the maximum torque, but the total torque of both sides must not exceed the maximum permissible torque of actuator.

With appropriate running time for 90° / 130°:

Torque in continuous operation

----- Release or starting torque = short-time torque

Max Max. permissible torque in continuous operation for all running times

Max Max. permissible release or starting torque for all running times

9/12

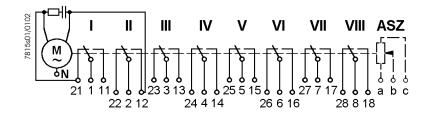

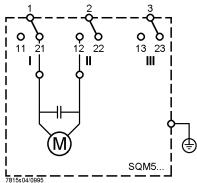

Diagram shows the maximum number of switches (2 end and 6 auxiliary switches). On versions with fewer than 6 auxiliary switches, the higher numbers are not used. For example, the actuator version with 2 end and 2 auxiliary switches does not use switches V, VI, VII and VIII.

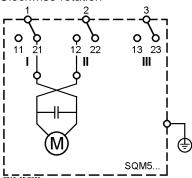

#### **Direction of rotation**

By exchanging the 2 motor connecting cables, the actuator's direction of rotation can be changed from counterclockwise to clockwise.

Counterclockwise rotation

Clockwise rotation

## Note!

When changing the direction of rotation from counterclockwise to clockwise, the cams must be readjusted.

# Clockwise rotation:

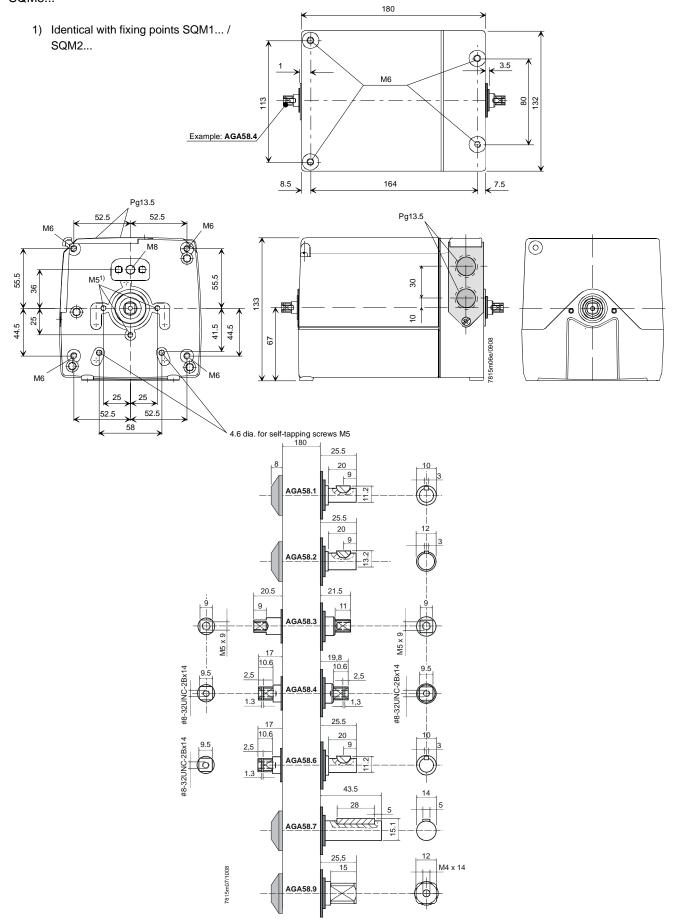

Red scales on the cam shaft, double arrow on the cams.

### Counterclockwise rotation:

Black scales on the cam shaft, single arrow on the cams.
